

Biologicals Tracking Services

Sensitel provides real-time monitoring of materials in transit and at raw material receiving stations, inspection stations, cold storage, environmental containers, and other critical hand-off points. Sensitel has partnered with leading vendors of wireless temperature data loggers, UHF and VHF temper-resistant tags, and data capture software providers to bring end to end tracking applications to the life sciences market. Sensitel's TagMap is a web-based, on-demand tracking service specifically designed to meet the aggressive requirements of the biopharmaceuticals industry.

How TagMap Works

TagMap monitors and aggregates all condition, quality and location related information as biologicals moves across the supply chain.

Tracking & Analysis

Data capture at receiving, shipping, storage, repack

Tags & Sensors

Built for Pharmaceuticals

- ✓ Secure role based web access
- ✓ 21 CFR Part-11 compliant
- ✓ Calibration certificates
- ✓ On demand reports
- ✓ User configurable rules & alerts on cell phones
- ✓ Support for UHF, HF, wireless sensors and 2-D barcodes.

TagMap Synchronization software is installed locally on field sites and distribution centers and uploads data to TagMap central server in real time. TagMap monitors the data streams against pre-configured business rules on aging, inventory and perish-ability. Actionable alerts are communicated to stakeholders via email and cell-phones. Users with privileges can log in from their desktop to review reports and upload/download data on demand. Secure access to the system is maintained through audit trails.

A single repository of materials movement data ensures that full cycle for product movement is available for review and monitoring, not just data from the last segment.

Reduce Time to Market

- Track receiving and shipping for clinical materials
- Automate record keeping for Clinical Trials Phase II, III and commercialization.
- Clinical Production Records
- Device History Records
- Association of package, operator, site.

Contact Us

Sensitel is unique in merging RFID reads with temperature information from data loggers to provide context-based tracking and monitoring of drugs and devices. Sensitel offerings are delivered by a world-class team with decades of years of experience in pharmaceutical and drug manufacturing, assembly, pilot laboratory development and commercialization. Sensitel is based in Sunnyvale and has offices in Mumbai, India and Vancouver, Canada. For more information on how Sensitel can help you with the success of your clinical trials, please call us at 408.538.2252 or visit www.sensitel.com
